

DIGITAL TIMER BOX

DOSING SYSTEM FOR SOLID PRODUCTS WITH
DIGITAL TIMER BOX - 230V

Reliable Simple, Cost-effective

Dosing system based on the dilution of a solid product without the aid of the measuring probe.

The dosing process activates by connecting the digital timer box in parallel to the water feeding solenoid valve (230V) on the dishwasher.

The dosing, pause-operating time on the timer box decides the concentration of product in the washing tank.

In "NEW GENERATION" dishwashers and potwashers, dosing can be controlled directly from the electronics of the machines themselves.

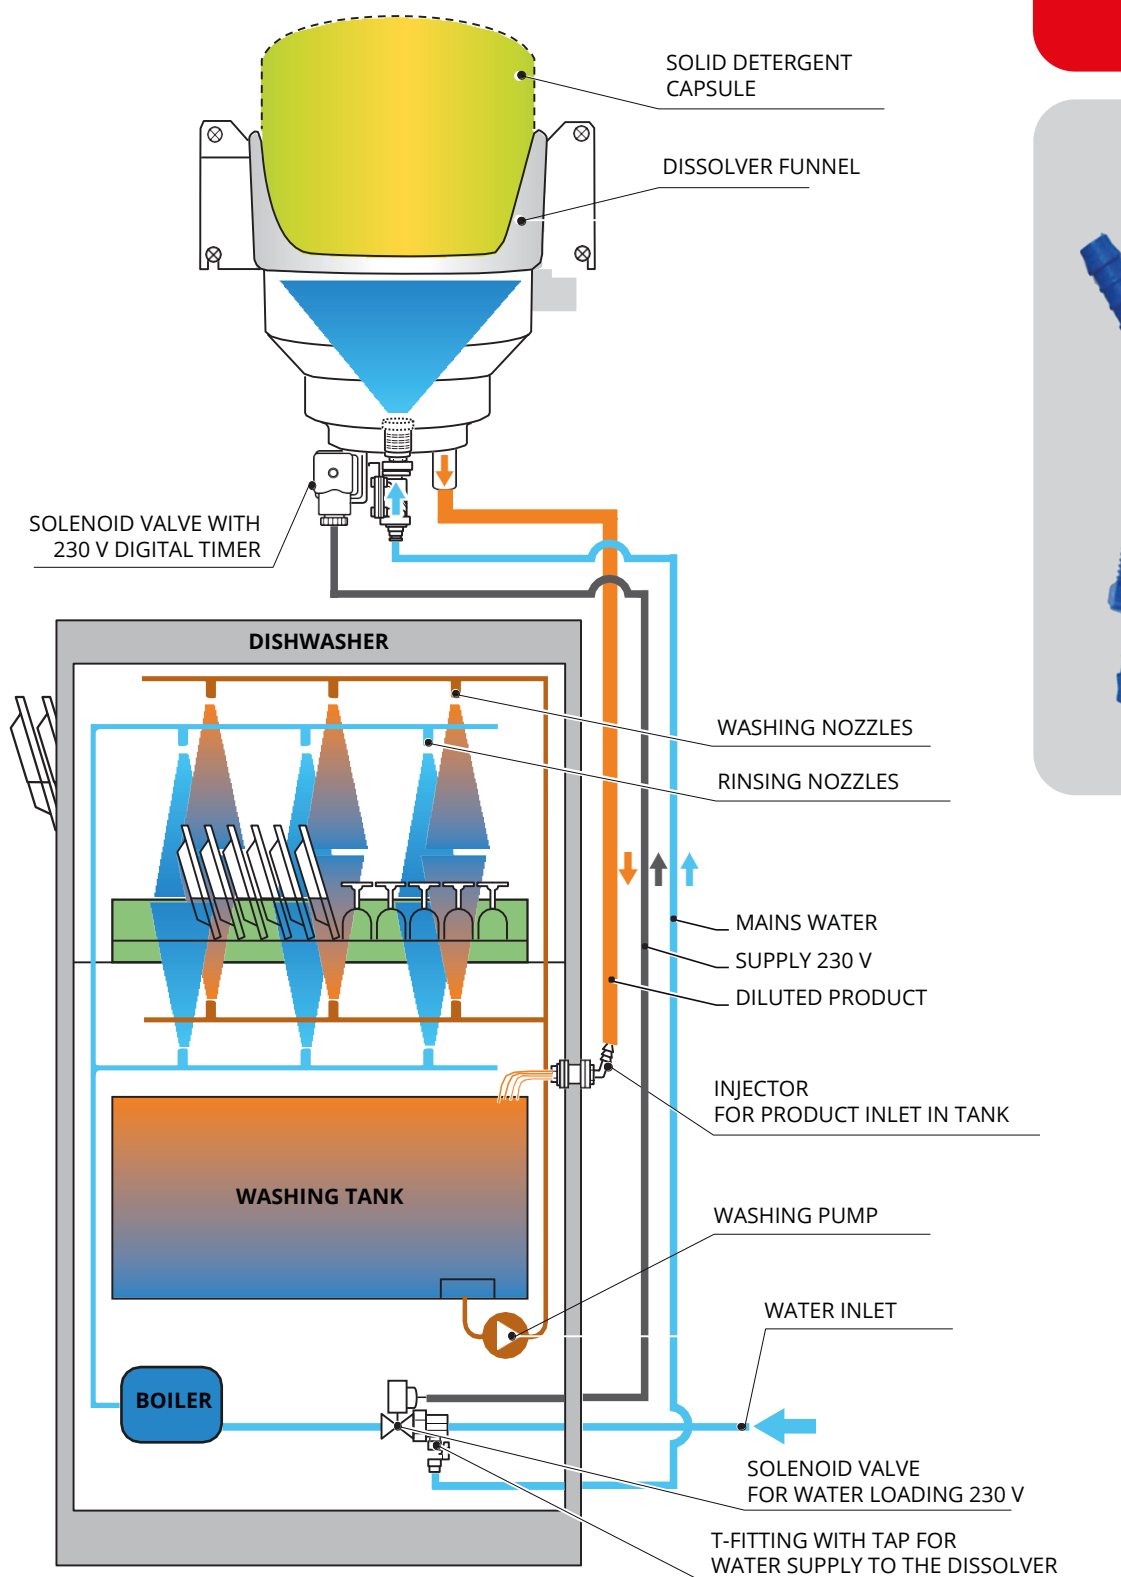

PATENT NUMBER 2736405

**The most simple, most
economical, accurate and safe
system for use on single tank
dishwashers for solid product
dosing.**

INSTALLATION DIAGRAM

Always install the dosing system at a safe and convenient height that allows the user to load/unload the 3.6 kg container and, at the same time, allows the washing solution to fall by gravity into the dishwasher tank.

CAUTION
TURN OFF DISHMACHINE BEFORE
CHANGING THE SOAP
CONTAINER
